

# DOCASSIST EASE OF USE

## When document technicians prove your product's ease of use

This well respected, international Law Firm approached MOSMAR when they needed to move from iManage to NetDocuments.

### Objective

To reconfigure their existing iManage templates to work with NetDocuments. We suggested DocAssist to handle this requirement – our Client agreed to a demo and they liked what they saw. It solved their NetDocuments integration requirement plus it provided the document automation they were after.

**DOCASSIST**  
*Simple Real-Time Document Automation*

---

## Solution

What stands out the most about this Client is how quickly they were up and running ... a testament to their savviness but also how easy it is for document technicians to pick up DocAssist and start using it.

After the initial demonstration, our Client moved ahead immediately to set up all their letterheads and recreate some documents by the following day. All they needed was a little guidance with the more advanced features.

## Outcome

A happy client who recreated and tested all 90 of their templates within a few months, rolling DocAssist out to the entire firm - a total of 760 users ... and growing.

The next exciting project they are looking at is using the Clippings feature within DocAssist. Clippings enables users to save pieces of text, clauses, tables or images for reuse in other documents. Clippings can include automation and is available for Word documents as well as in Outlook emails.

Our Client is now looking to replace their current bespoke clause bank solution hosted in SharePoint with the DocAssist Clippings feature. They are eager to start work on this soon, so watch this space for an update.
